Product Equivalence Guide to Accompany C&M Wound Care Formulary Final

This document is designed to support the adoption of the Cheshire and Merseyside Wound Care Formulary (WCF) by providing a concise overview of its purpose and guidance on product transition.

The Cheshire and Merseyside Wound Care Formulary (WCF) aims to provide general principles on the management of wounds to help practitioners establish appropriate treatment options and inform aspects of care. This companion document lists wound care products currently in use that are not included in the final formulary. It should be used alongside the WCF to identify discontinued items and their recommended replacements.

Product information is presented at a high level and does not include variations within product lines (e.g., sizes, shapes, or specifications). For detailed product data, including NHS Supply Chain reference codes, sizes and specifications, please refer directly to the formulary.

Replacement products are shown in green and discontinued items are shown in red. Recommended usage (e.g., “1st Line” or “TVN/Specialist only”) is also indicated for products included in the WCF. Products are organised into 18 categories, as listed in the contents. Where applicable, categories are further subdivided, with these divisions shown in the first column of each table.
